EsportsEdge Design Document

Project Name:

EsportsEdge – a match tracking and statistics platform for casual and competitive esports players.

Project Description:

EsportsEdge is a match tracking and statistics platform built for casual and competitive esports players. Gamers who play titles like Valorant, Rocket League, or League of Legends in friend groups often want to track their results without relying on official ranked systems that only cover certain modes. EsportsEdge allows users to log custom matches, manage game titles, and track player performance over time. By recording match results and reviewing past games, players can view statistics that highlight trends in performance and compare results within their group.

Members: Raagini Tyagi, Rahul Nayak

Division of Work:

Rahul Nayak - Game Titles & Match Management

Responsible for implementing full CRUD functionality for game titles and match records. This includes creating and managing game entries, logging match results, editing or deleting matches, browsing match history with filters, and viewing detailed match information pages (with stats such as total matches played by game title, etc).

Raagini Tyagi - Player Accounts & Profiles

Responsible for implementing full CRUD functionality for player accounts and profiles. This includes user registration and login, creating and managing player profiles, viewing player statistics such as wins and losses, browsing the player directory, and viewing head-to-head comparisons between players.

User Personas:

Competitive Gamer (Tyler)

Plays custom matches with a regular squad and wants a reliable record of results and stats over time.

Stat Nerd (Priya)

Loves analyzing gameplay performance and wants to view statistics such as win rates and head-to-head matchups between players.

Casual Player (Sam)

Plays occasionally and just wants a fun way to see how often he wins against his friends.

<u>User Stories:</u>

Game Titles & Match Management (Rahul Nayak)

- As a user, I want to create game titles with a name, genre, and platform so matches can be organized by game.
- As a user, I want to view a list of all available game titles so I can easily select the correct game when logging a match.
- As a user, I want to log a match by selecting a game title, entering the match date, and selecting participating players so results can be recorded.
- As a user, I want to edit or delete a match record so mistakes in logged results can be corrected.
- As a user, I want to browse past matches filtered by game title or date so I can easily find previous match results.
- As a user, I want to view a detailed match page showing the players involved, the winning side, and the match date so I can review specific matches.

Player Accounts & Profiles (Raagini Tyagi)

- As a user, I want to register and log in so my match history and statistics are associated with my account.
- As a user, I want to create and update my player profile so my information and identity are displayed correctly in the system.
- As a user, I want to view my player profile showing total matches played, wins, losses, and win rate so I can evaluate my performance.
- As a user, I want to browse a directory of all players so I can view other players' profiles and statistics.
- As a user, I want to view head-to-head statistics between myself and another player so I can track our performance against each other.

Design Mockups/Wireframes:

We created our initial design mockups/wireframes on *Excalidraw*.
